

UNIVERSITY OF SASKATCHEWAN

College of Agriculture
and Bioresources

AGBIO.USASK.CA

GRADUATE PROGRAMS

At the College of Agriculture and Bioresources, our mission is to advance the responsible use of land, water and bioresources to provide products and services that enhance the quality of life for the people of Saskatchewan and around the world. We have over a century of innovative products and practices that have transformed the world.

Our five departments provide the foundation for our broad array of research activities and graduate programs. We accept students for research-based post-graduate study at the masters and doctoral levels across a broad array of both basic and applied research. For those interested in course-based training, P.G.D. and M.Agr. programs are available in some departments.

For more information, visit

agbio.usask.ca

Prospective graduate students wishing to attend the University of Saskatchewan must apply through the College of Graduate and Postdoctoral Studies (cgps.usask.ca) but the recommendation for acceptance is made by the department.

Before applying, prospective graduate students (with the exception of those interested in Agricultural Economics and Applied Economics) should identify and contact a potential supervisor with a similar research area of interest to their own to determine whether any positions are available.

.....

ACADEMIC PROGRAMS OFFERED
